DETAILED ACTION

This application is a continuation of 08/789,886, filed January 28, 1997, now abandoned.

Claims 1-10 are pending.

Election/Restriction

Applicant's election of group V, claim 10, is acknowledged. The election is made with traverses, but because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-10 are pending. Claims 1-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement. Claim 10, drawn to a method of generating an infectious, replication deficient, recombinant adenoviral particle.

Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Specifically, 18-21 32 references are listed that are cited in the body of the specification, however a copy of

Art Unit: 1632

references have not been provided. Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically, claim 10 recites the limitation "said mixture" in line 5, however both lines 3 and 4 provide for a composition that is a mixture. There is insufficient antecedent basis for this limitation in the claim. More clearly setting forth what mixture is used in the method step would obviate the basis of the rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 10 is rejected under 35 U.S.C. 102(a/e) as being anticipated by Wilson et al. (US 5,585,362).

Claim 10 broadly encompasses using a replication deficient virus and a helper cell containing a helper plasmid. Wilson *et al.* teaches adenoviral vectors wherein at least E3 and E1 regions are deleted. By deleting these regions any resulting adenoviral particle containing the adenoviral vector will be replication deficient. Wilson *et al.* teaches that the method to generate such replication deficient particles is to use complementary sequence to that missing from the vector. Wilson *et al.* teaches that this deleted sequence can be provided to a cell, in particular 293 cells, wherein the genes deleted from the vector are expressed, allowing a particle to be formed. Wilson *et al.* teaches that the helper cell is cultured under normal cell culturing conditions, *i.e.* 37°C.

Conclusion

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Woitach whose telephone number is (703)305-3732. After January 12, 2004, the Examiner's telephone number will be (571) 272-0739.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Reynolds, can be reached at (703) 305-4051. After January 12, 2004, Deborah Reynolds telephone number will be (571)272-0734.
